

INDIANAPOLIS INTERNATIONAL AIRPORT

Indianapolis, IN

PROJECT HIGHLIGHTS:

- Ground Mounted Solar Array
- Solar Maintenance
- Demand Management
- Facilities Management
- Remote Monitoring

Project Duration:
Solar: 3 years (1yr/phase)

Project Size:
25MW Ground Mount Solar
Array

Contract Amount:
\$ 68,000,000

Facilities Maintenance:
10 year contract

Facility Info:
1,650,000SF hangar facility
over 9,000 assets managed

Contract Amount:
\$ 3,500,000

OBJECTIVES:

Veregy collaborated with the Indianapolis Airport Authority to create a system that produces energy while reducing costs and eliminating excess charges for peak demand. Veregy utilizes remote monitoring and demand management technology to ensure a productive and stable system, while maintaining the grounds and solar arrays. Along with solar services, the IAA and Veregy partnered to create a facilities management agreement. Veregy now manages and operates over 9,000 assets in two different facilities for the Indianapolis International Airport. This includes interior/exterior lighting, mechanical and electrical systems, hangar doors, pressure steam systems, and even snow removal. With a combination of solar maintenance and facility management, Veregy helped the Indianapolis International Airport stabilize one of the most variable items in its budgets – the cost of energy. Veregy is currently saving the IAA \$1,045,288 a year in Energy/Operations costs. This project combines a 25MW Ground Mounted Solar System with Facilities Management and Operations.
